## This Week...

Maths this week has been about learning written methods for multiplying numbers. We have revised the grid method, long method and then focused on the short method. We have found the product of a single digit and a 4 digit number and then the product of a 2 digit number and another 2 digit number.

Writing stories has been the focus in English. We have selected and downloaded a photo of a faraway place and written descriptive sentences. We invented a character and then planned and started to write the first draft of our own story.

As scientists we investigated a question about lifecycles of different animals and the habitats in which they live. We used the internet for research and then presented our findings in creative ways.

In Art this week we planned and painted our own landscapes. (Last week we spent our Art time finishing our newspapers about George Mallory.) We were thinking about the palette that we used and how to use the colours to help create perspective.

We have also continued to sew. We have tried to finish the applique decoration on our bags.

## Ambassadors of the Week

**Poppy**— who has been trying hard to improve her French speaking

**Dexter**— who created some fantastic sentences to describe a setting

## Information for Families

Our class assembly date has changed to Valentine's Day—Feb 14th
